Syngenta is a leading science-based agtech company. We help millions of farmers around the world to grow safe and nutritious food, while taking care of the planet. Our goal is to discover new, more effective crop protection solutions that safeguard the world's food against diseases, weeds and pests, while also protecting ecosystems. That is why we have put AI at the heart of our research and development.

In this session we will explore how Databricks helped us go from data silos in R&D to integrated data and make what felt years away within reach. Join me in a personal retrospective of the challenges, joys and benefits of providing data@scale to the industry's most productive innovation engine. Until then enjoy this video on the agriculture revolution: <https://www.youtube.com/watch?v=X1lk2QccaPw>
