

Jens-Uwe Peters

studied chemistry at the University of Göttingen and the University of California, San Diego. He then worked in Siegfried Blechert's labs at the TU Berlin, obtained his Ph.D., and did a postdoc with Julius Rebek at the Scripps Institute in La Jolla. In 1999, he joined the Discovery Chemistry department of F. Hoffmann-La Roche Ltd. in Basel, and has since contributed to numerous drug discovery projects. In parallel to his project work, he has been active in several work groups concerned with the assessment, interpretation, and optimization of molecular properties. His particular interest has been the polypharmacology of drugs. He published four papers on this topic, edited a book, and gave numerous presentations at conferences.
