

Elodie Brun

Elodie BRUN studied Chemistry at the Ecole Normale Supérieure and obtained a master from the Université Pierre et Marie Curie (Paris, France). She completed her PhD in 2015 at the ESPCI ParisTech (Paris, France), working on the development of synthetic methodologies towards 1,3-polyols and their application to natural products synthesis, under the supervision of Prof. Janine Cossy and Prof. Véronique Bellosta. She then moved to the University of Geneva as a postdoctoral researcher in the group of Prof. Jérôme Lacour, working on the development of transition metal catalyzed reactions, synthesis of macrocyclic structures and study of their spectroscopic studies. In 2019, Elodie joined the Chemical & Process Sciences team at dsm-firmenich (Geneva) as a Scientist in the New Ingredients discovery group and recently transitioned to her current position of Senior scientist in the New ingredients process R&D team, working on the development of the next generation of fragrances.
