

Johannes Walker

Johannes completed his PhD under Prof. Tim Donohoe at the University of Oxford, working on natural product synthesis and the photochemical synthesis of aromatic heterocycles. He then moved to the Technische Universität Berlin for a postdoctoral stay with Prof. Martin Oestreich, working on main-group and Brønsted acid catalysed metal-free transfer reactions. This stay was supported by a Theodor Heuss Research Fellowship from the Alexander von Humboldt Foundation. In April 2020 he moved to the Georg-August-Universität Göttingen to take up a Junior Professorship in Organic Chemistry. From 2024–2025 he held a deputy professorship at the Universität Leipzig.
