

**PC-based control: From hygienic laboratory transport solutions
to reliable and connected process control**

Tobias Bachmann & Eric Schaller

Beckhoff Automation AG (Schweiz), Schaffhausen
e.schaller@beckhoff.ch

We demonstrate how our innovative PC-based control platform can be used to control a modern, networked laboratory facility or medical robot (e.g., by integrating cloud IOT technology), including a transport system (XPlanar), a possible interface to an AMR, process control with redundant control (e.g., filling), or artificial intelligence and vision for control.

The presentation would take the form of a dialog between the two presenters.
